

3D widgets for vtk Status Report 04

Friday 3rd November 2006

Had a great week looking through a few reams of information on CATIA whilst waiting for news from Will. Now I am looking forward to going through things with Steve to focus more around improving things for Slicer.

Comparing software

CATIA study finished. This is a very large piece of software with a steep learning curve. In order to get started I needed to spend a lot of time with colleagues who use CATIA regularly. Also have Maya (Personal Edition) to try out as suggested by Will Schroeder.

Next steps

Create initial test code template for testing 3D widgets.
Complete studies.
Liase with Steve Pieper about Slicer.
Update Wiki.
